SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	02/08/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

**Office Action Summary**

Application No.

09/811,662

Applicant(s)

BAKER, THOMAS W.

Examiner

Alina N Boutah

Art Unit

2143

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 03 March 2006.  
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.  
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-20 is/are pending in the application.  
4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.  
6) ☒ Claim(s) 1-20 is/are rejected.  
7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.  
8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.  
10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All b) ☐ Some \* c) ☐ None of:  
1. ☐ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  
\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)  
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)  
3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.  
4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.  
5) ☐ Notice of Informal Patent Application (PTO-152)  
6) ☐ Other: \_\_\_\_\_.

## **DETAILED ACTION**

### ***Response to Amendment***

This action is in response to Applicant's amendment filed March 3, 2006. Claims 1-20 are pending in the present application.

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 3, 2006 has been entered.

### ***Specification***

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an

Art Unit: 2143

international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1, 3-6 and 8-13 are rejected under 35 U.S.C. 102(e) as being anticipated by USPN 6,635,088 issued to Hind et al. (hereinafter referred to as Hind).

Regarding claim 1, Hind teaches a method of processing a received message at a receiving device, the method comprising:

receiving a message expressed in a non-negotiated language (abstract; figures 3A-3B) said message having at least one tag;

analyzing said at least one tag to determine if said receiving device can process said message (col. 1, lines 15-34; lines 48-61, line 57 to col. 2, line 2); and

processing said message when said analyzing determines said receiving device can process said message (col. 1, lines 48-61).

Regarding claim 3, Hind teaches the method of claim 1, wherein the message comprises: a start tag and an end tag (col. 2, lines 27 and 57).

Regarding claim 4, Hind teaches the method of Claim 3, wherein the message further comprises data encapsulated between said start and end tag (col. 2, lines 56-67).

Regarding claim 5, Hind teaches the method of claim 1, wherein said step of processing the message, comprises executing an instruction associated with the message (col. 2, lines 24-55).

Art Unit: 2143

Regarding claim 6, Hind teaches a method of processing received messages, the method comprising:

receiving a message in a non-negotiated language (abstract; figures 3A-3B);

parsing said messages to determine if said messages are decipherable (col. 1, lines 15-34, line 62 to col. 2, line 23); and

processing those messages determined to be decipherable (col. 1, lines 48-61).

Regarding claim 8, Hind teaches the method of claim 6, wherein the step of processing comprises executing an instruction associated with at least one of said comprehended messages (col. 2, lines 24-55).

Regarding claim 9, Hind teaches the method of Claim 6, wherein the step of processing comprises storing data associated with at least one of said comprehended messages (col. 3, lines 23-48).

Regarding claim 10, Hind teaches the method of claim 6, wherein said comprehended messages are written in a human readable text message (col. 2, lines 23-28).

Regarding claim 11, Hind teaches the method of Claim 8, wherein said executing an instruction comprises displaying information associated with at least one of said deciphered messages (col. 12, lines 14-19).

Art Unit: 2143

Regarding claim 12, Hind teaches the method of Claim 6, wherein at least one of the messages comprises a start tag, an end tag and data encapsulated between said tags (col. 2, lines 23-55).

Regarding claim 13, Hind teaches the method of Claim 6, wherein at least one of the messages is written in an Extensible Markup Language (abstract).

Claims 2 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hind in view of USPN 6,763,499 issued to Friedman et al (hereinafter referred to as Friedman).

Regarding claim 2, Hind fails to teach the method of claim 1, wherein said analyzing includes comparing said at least one tag with a table of said receiving device and determining said message can be processed if said table includes said at least one tag. Friedman teaches comparing a tag with a table of received device and determining a message if the table includes at least one tag (col. 14, lines 10-40). At the time the invention was made, one of ordinary skill in the art would have been motivated analyze by comparing at least one tag with a table of receiving devices in order to ensure that the data is consistent with the data in the table, thus allowing only data capable of being analyzed to pass through the system, therefore minimizing the processing time.

Claim 7 is similar to claim 2, therefore are rejected under the same rationale.

Art Unit: 2143

Claims 14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hind in view of USPN 6,738,803 issued to Dodrill et al (hereinafter referred to as Dodrill).

Regarding claim 14, Hind teaches a system of a receiving device for receiving at least one message expressed in a non-negotiated language, comprising:

a tag recognizer configured to determine to what extent the message can be processed said receiving device by analyzing tags in the message (col. 1, lines 15-61), said analyzing occurring at said receiving device; and

a controller configured to process the message based on the determination of the tag recognizer (col. 1, lines 15-34, line 62 to col. 2, line 23).

However, Hind fails to explicitly teach disregarding an unrecognized message. Dodrill teaches disregarding an unrecognized message (abstract; col. 4 line 62 to col. 5, line 27). At the time the invention was made, one of ordinary skill in the art would have been motivated to disregard an unrecognized message in order to allow only messages that are capable of being discerned to pass through the system, therefore minimizing processing time.

Regarding claim 15, Hind teaches the system of Claim 14, wherein the message is a readable text language (col. 2, lines 23-55).

Regarding claim 16, Hind teaches the system of Claim 14, wherein at least one message includes a start tag and an end tag (col. 2, lines 23-55).

Art Unit: 2143

Regarding claim 17, Hind teaches the system of Claim 14, wherein said system is a personal digital assistant (PDA) for receiving the message in a wireless environment whereby no fixed handshaking protocol is used to receive the message (col. 3, lines 8-10).

Regarding claim 18, Hind teaches the system of Claim 17, wherein said PDA displays information to a user to the extent the message is discerned by said parser (col. 3, lines 1-48).

Regarding claim 19, Hind teaches the system of Claim 14, Hind teaches wherein the message is written in an Extensible Text Markup Language (col. 4, lines 42-64).

Regarding claim 20, Dodrill teaches the system of Claim 14, wherein said at least one message includes multiple portions having tags associated therewith, said tag recognizer configured to determine if each of said multiple portions are decipherable by analyzing said associated tags and said controller configured to process or disregard said each of said multiple portions based on said decipherable determination (figures 5A and 8).

### ***Response to Arguments***

Applicant's arguments with respect to independent claims 1 and 6 have been considered but they are not persuasive.

In response to Applicant's argument that Hind does not teach analyzing at least one tag of a received message expressed in a non-negotiated language to determine if the receiving device can process the messages, the Patent Office respectfully submits that this is taught in col. 1, lines 25-27, lines 58-61, as well as col. 1, line 67 to col. 2, line 2 of Hind. Specifically, the cited area

Art Unit: 2143

of Hind teaches a parser recognizing characters in an XML tag (col. 1, line 25-27), parsing tags of the model from the received file (col. 1, lines 58-61), and the DTD telling the parser how to interpret the document, which was created according to that DTD (col. 1, line 67 to col. 2, line 2). By definition, parsing is analyzing. Hind parses the tags to determine how to recreate the information in a data model. The recreation of the information is interpreted as "processing" the message as claimed.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alina N. Boutah whose telephone number is 571-272-3908. The examiner can normally be reached on Monday-Friday (9:00 am - 5:00 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A. Wiley can be reached on 571-272-3923. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
